YUBA-SUTTER FARM BUREAU CROP TALK

is published monthly by the Yuba-Sutter Farm Bureau, a non-profit trade organization whose mission is to represent Yuba-Sutter agriculture through public relations, education

and public policy advocacy in order to promote the economic viability of agriculture balanced with appropriate management of natural resources. This magazine and the activities sponsored by the Yuba-Sutter Farm Bureau are paid for by the annual dues of its membership.

Articles published in Crop Talk may be reprinted without permission provided credit is given to the Yuba-Sutter Farm Bureau and a copy of the issue in which the reprint appears is forwarded to our office listed below.

Article suggestions are encouraged, and we also encourage our members to submit their own articles for review. These should be mailed to our office. Use of articles is at the sole discretion of the Crop Talk Editor.

Spring Heat Linked to Early Harvest Starts for Almonds, Peaches, and Prunes

By Franz Niederholzer, UCCE Orchards Advisor, Sutter/Yuba Counties

Reality: Almond, peach, and prune harvests started weeks ahead of average this year in the Yuba/Sutter region. Peach and prune fruit size, in general across the region, may be off compared to years with cooler springs.

Question 1: If plant development is driven by temperature and much of the weather this growing season was seasonal (“normal”), why are harvests so early? Could just the 4-6 weeks of early (Feb and March) heat make that much difference in harvest timing? The short answer is “yes”.

Research results confirm that early post bloom heat accumulation is closely related to a shorter growing season. More early heat = less time from bloom to maturity, although the actual difference is less than 5% -- about 5 days less this growing season for prunes. Since warm winter (see Table 1) weather promotes early bloom, the additive effect of both an early bloom date and shorter crop development (days from bloom to maturity) this year produced the earlier harvests in almonds, peaches, and prunes. Sacramento Valley temperatures generally cooled to seasonal levels beginning in early April, so it remains to be seen how/if walnut harvest timing will be any earlier than expected given the early bloom timings this year, which were promoted by the warm March temperatures.

Question 2: If heat drives plant growth and there were very warm early season temperatures, why are fruit generally smaller at harvest?

Warmer spring temperatures do increase fruit growth rate (if there are enough sugars and nutrients from the rest of the tree to fuel that growth) but also speed up fruit development, shortening the time that fruit must grow early in the season

when fruit size potential is set. In the spring, shoots are growing as well as fruit and, depending on crop load, the availability of fuel for fruit growth (resources) may limit growth potential of individual fruit even as warm temperatures mean fruit could grow faster if resources were available. On top of that, the fewer days to reference date measured in warm springs means that while fruit growth rate potential is more rapid (heat drives growth) the amount of time a fruit is in a particular growth stage is shorter. This year, the 40 days from full bloom in prunes to reference date, an important time of fruit development, was about 12% less time than the average over the last 16 years. Warm spring temperatures mean that fruit growth rate can increase if resources are available, but the days available for that growth to occur are fewer. This can mean smaller fruit at harvest.

Conclusion: There is no changing the weather, but there are steps to manage conditions when spring weather is warm. A UC Davis website reports heat units (Grower Degree Hours; GDH) during the first 30 days after full bloom (GDH30) using grower entered full bloom dates and CIMIS weather stations. [Find this website at <https://fruitsandnuts.ucdavis.edu/weather-models>. There is also a model to predict almond hull split, which uses temperatures for 90 days after full bloom.] Experience shows that higher GDH30 means generally shorter growing seasons and smaller fruit sizing potential. When GDH30 levels are high (2026 = 8300 for many prune orchards in Sutter and Yuba Counties), early-as-possible thinning is advised so fruit can grow as rapidly as possible in the shorter development timing available.

For questions about this article, please call Franz Niederholzer at (530) 218-2359 or email at fniederholzer@ucanr.edu.

Table 1 caption. The difference between the daily maximum temperature in Marysville, CA (Yuba Co airport) and the average maximum daily temperature from Feb 1 to June 1. In much of March of this year, daily maximum temperatures were 15-20oF higher than average.

Table 1 Alt Text: A bar chart showing the difference between daily maximum temperature in Fahrenheit in 2026 and the average maximum temperature for each calendar date from February 1 to June 1. From February to early April, the daily differences are 10-20 degrees higher than average except for 6 days in mid-February when the values are negative. After April 1, the values vary between positive and negative with more days showing more negative values.

A century of
commitment.
And counting.

For over 100 years we have seen the cycles, weathered the storms and adapted with the times, steadfast in our commitment to support producers and rural communities alike. Because some things should never change.

Five Ways to Improve Biodiversity on Your Farm

By The Owl Box Company

A farm with more variety tends to hold up better over time.

More kinds of plants and animals mean natural pest control, healthier soil, and steadier production. Here are five practical steps you can take.

1. Install barn owl boxes

Barn owls hunt rodents at night and work your ground for free once they settle in.

- Benefit: cut gopher, rat, and vole damage without chemicals, as one part of your IPM plan.
- How to start: mount boxes 10 to 12 feet high near your orchard, vineyard, or fields with rodent pressure.

2. Plant cover crops

Cover crops feed your soil and draw in helpful insects.

- Examples: clover, vetch, and ryegrass.

- Benefits: build soil fertility, hold soil against erosion, and give pollinators a place to feed.

3. Create buffer zones

Strips of native plants along field edges protect water and shelter wildlife.

- What to include: grasses, shrubs, and trees native to your area.
- Impact: slow runoff, improve water quality, and support birds and insects.

4. Limit chemical use

Pesticides and herbicides hit more than their target.

- Alternatives: an IPM approach backed by natural predators like owls and hawks.
- Outcome: a safer setting for beneficial insects and animals.

5. Rotate crops

Rotation breaks pest cycles and keeps soil in better shape.

- How it works: alternate crops in a field to disrupt the pests and diseases tied to one crop.
- Long-term benefit: varied crops support a wider range of wildlife.

Building biodiversity on your ground

You do not need all five at once. Pick one and start there.

Each step supports the others. Cover crops and buffer zones feed the insects that feed the birds. Owls and hawks handle rodents so you lean less on chemicals. Together they build a farm that works with the land.

Want to see where barn owls fit into your biodiversity plan? A short site review shows you which blocks suit boxes and how they pair with your other practices. Contact Nick at 559-352-8067 or by email TheOwlBoxCompany@gmail.com, or visit www.OwlBoxCompany.com. 🦉

YSFB Summer 2026 Internship

By Kenzie Garramore, YSFB Intern

My name is Kenzie Garramore, and I was the 2026 Agricultural Communication and Outreach Intern at the Yuba-Sutter Farm Bureau. I am currently attending California State University, Fresno, where I am majoring in Agricultural Business and minoring in Plant Science. My involvement with the Yuba-Sutter Farm Bureau began during and continued after high school through volunteering at events such as the Spring Fling for Ag Education Dinner, AgVentures, and Spray Safe. These experiences allowed me to become more involved in the agricultural community, build relationships with industry professionals, and develop a strong connection to the organization.

In 2025, I was honored to receive a Yuba-Sutter Farm Bureau Scholarship. Having personally experienced the organization's support, I have a deep appreciation for the Farm Bureau and its commitment to agriculture and our community. This made the opportunity to serve as an intern especially meaningful, as I was able to give back to an organization that has supported me throughout my education and involvement in agriculture. I would also like to extend my sincere thanks to all the scholarship donors who make the Yuba-Sutter Farm Bureau Scholarship possible. Thank you for supporting agricultural education and investing in the next generation of agricultural leaders. Your generosity not only helped support my education but also encouraged me to continue growing within the agricultural industry and give back to the community that has supported me.

During my internship, one of my primary projects was creating an Ag Crimes educational resource for local law

YSFB Intern Kenzie Garramore, Photo Credit: YSFB

enforcement. The resource highlights the top agricultural commodities in the Yuba-Sutter area, their harvest periods, and the equipment commonly used throughout each stage of production. The goal was to provide local law enforcement with a quick reference guide to help them recognize agricultural equipment and understand when and where certain equipment would typically be operating throughout the year.

To develop this resource, I worked closely with growers and agricultural companies throughout the Yuba-Sutter area. I photographed equipment for the resource while learning more in depth about the production and harvest practices associated with each crop. These conversations also gave me the opportunity to hear directly from growers about their concerns regarding agricultural crime in our community. This project allowed me to combine my agricultural knowledge with

communication and outreach while creating a resource that can directly benefit our local agricultural community and law enforcement.

In addition to the Ag Crimes project, I helped plan and coordinate AgVenture's educational display at the Yuba-Sutter Fair. I also contributed writing, interviewing, and content creation for the Yuba-Sutter Young Farmers and Ranchers. These experiences allowed me to strengthen my communication skills while learning how agricultural organizations connect with producers, industry professionals, and the broader community.

Alongside my internship with the Farm Bureau, I also interned with the Sutter County Agricultural Commissioner's Office. There, I conducted phytosanitary field inspections of field

crops to identify plant diseases, collect samples for diagnostic testing, and ensure crops met plant health and export requirements. This experience provided me with additional hands-on knowledge of crop production, plant health, and agricultural regulations.

Together, these experiences have strengthened my understanding of agriculture from both a field and industry perspective and have helped shape my future career goals. I hope to pursue a career in agricultural sales and marketing, specializing in crop protection products and agricultural inputs, or pursue a career as a Pest Control Advisor (PCA). My experiences this summer have given me a better understanding of the many ways I can contribute to agriculture while continuing to build relationships with growers and serve the agricultural community that has played such an important role in my life. ☺

Three Generations and Growing: The Family Legacy of Mitchell Dryers

By Leslie Williams, YSFB Program Coordinator

Built in 1992 by Neil and Sandie Mitchell, Mitchell Dryers sits on a south Sutter County parcel of land purchased by Neil's mother and father in 1952. In 2012, Neil and Sandie formed an LLC with their son Joseph (Joe), also inviting longtime operations manager Jose Raya and family friend Money Dhami to join them in the business. Today, Joe and Jose run daily operations, which are currently in full swing with prunes. Joe and his wife Sandra have five children, two boys and three girls, who were all on site for our visit to the dryer, enjoying one last day of summer at the family business, before school is back in session. With the oldest going into high school and the youngest starting kindergarten, the future of Mitchell Dryers looks bright!

With over a century of collective experience among the collaboration of partners, their primary business focus is on providing customers with walnut hulling and prune dehydration services. They have a wide and diverse customer base, with relationships that span decades.

During a recent visit to the dryers to see their operations up close, I was struck by the cleanliness and organization of the work underway. Approximately 25 workers, from the weighmaster to the sorting belts, and dryers to storage, were working swiftly yet expertly at their tasks, with notable smiles and friendly banter. The dryers hummed at a consistent 185-187 degrees, and the sweet aroma of the prunes called me to try one right off the prune board, still warm from the process. What a treat! Mitchell's involvement in the industry doesn't stop at their business enterprises. Their family has been involved behind the scenes with the California Prune Board, Walnut Commission, and local water districts, just to name a few. Joe Mitchell serves as a director on the Feather Water

Mr. & Mrs. Joseph Mitchell and Family,
Photo Credit: YSFB

District board. Family Patriarch Neil served on the California Prune Board for an impressive 40 years, and Matriarch Sandie still serves on the Prune Board Executive Committee and as the district 3 representative. You can even find Sandie's favorite Prune Cake recipe on the Prune Board website at <https://californiaprunes.org/recipe/old-fashioned-prune-cake>.

Despite a strong customer base with established alliances, Mitchell Dryers is not immune from the hurdles many agriculture families face across various commodities. Challenges related to overhead costs such as labor, utilities, fuel, combined with pressure from higher value crops replacing prunes, are common concerns for Mitchell Dryers

Mitchell Dryers partner Jose Raya and wife Patty, Photo Credit: YSFB

and companies like them throughout the state. This is one reason the Mitchells believe in Farm Bureau Membership, citing the value in the strong advocacy the Yuba-Sutter Farm Bureau (YSFB) provides on these issues and others.

Joe also noted that he believes the work the YSFB does related to program management for the Butte-Yuba-Sutter (BYS) Water Quality Coalition and the Placer-Nevada-South Sutter-North Sacramento (PNSSNS) Sub-watershed Group is a vital service and a great resource and representation for farmers.

Mitchell Dryers, a YSFB Business Support Member, is located at 10139 Garden Hwy, south of Yuba City. They can be reached at 530-671-3397. ☎

YF&R Summer Fun and Fall Events Ahead

By YS YF&R Committee

The Yuba-Sutter Young Farmers & Ranchers (YF&R) have stayed busy this summer, and the fun continues! This month, members took a break from the summer heat and headed to the river for a group float. We had a great time relaxing and building connections outside of the usual meetings.

Thank you to everyone who joined us for the river float!

We are looking forward to our August meeting and hope you will join us on Wednesday, August 26th for an ag tour about prunes.

Attendees will learn more about the local prune industry, from growing and harvesting to the challenges and opportunities facing producers today. Like at all meetings, dinner will be provided.

Don't forget to RSVP! When you RSVP and attend our events, you will be entered into our end-of-the-year raffle.

For September, we are bringing back our YF&R Drive-Thru BBQ Fundraiser! The event will take place on September

30th and will support our annual YF&R scholarships and members' professional development opportunities. This year, YF&R awarded \$2,100 in scholarships to three local high school seniors, thanks to the support we receive through this fundraiser.

Meals are \$65 and feed a family of four. The meal includes a whole tri-tip, beans, salad, rolls, and cookies.

We will be looking for YF&R members to help sell tickets and prepare dinners, so watch for more information on how you can get involved. Help us make this year's fundraiser another success while supporting the next generation of local agriculture!

YF&R welcomes new members and participants throughout the year. Whether you are directly involved in production agriculture, work in an agricultural-related industry, or simply want to become more involved in our local agricultural community, we encourage you to join us at an upcoming event. 🍷

YUBA-SUTTER YOUNG FARMERS & RANCHERS

DRIVE THRU BBQ

**Wednesday,
September 30th**
4:00 PM - 7:00 PM

Annual California Rice Field Day Slated for August 26, 2026, in Biggs

From California Cooperative Rice Research Foundation, Inc.

Rice Field Day - Photo Credit CCRRF

The annual Rice Field Day will be held Wednesday, August 26, 2026, at the Rice Experiment Station (RES) in Biggs, Ca. The California Cooperative Rice Research Foundation, Inc (CCRRF) extends the invitation to rice research and industry professionals and their associates to join them for this informative event. The purpose of the Rice Field Day is to give rice growers and others an opportunity to observe and discuss research in progress at RES.

Rice Field Day is sponsored by the CCRRF and University of California. They also receive support from many agricultural businesses, many of which will have vendor displays at the event. Below is a brief outline of the agenda for the day, and you can find up-to-date program information on their website at www.crrf.org.

7:30 – 8:30 a.m.	Registration
8:30 – 9:15 a.m.	General Session • CCRRF Annual Membership Meeting • Rice Research Trust Report • Ca. Rice Industry Award
9:30 – Noon	Field Tours of Rice Research • Variety Development • Disease and Insect Management • Agronomy and Fertility • Weed Management
12:00 (Noon)	Lunch

The Biggs RES is located at 955 Butte City Highway (Hwy 162) approximately 2.5 miles west of Highway 99, north of Biggs.

Yuba-Sutter Farm Bureau to Host 2026 Candidate Forum

By Leslie Williams, YSFB Program Coordinator

The Yuba-Sutter Farm Bureau (YSFB) is excited to host a public forum for California Assembly District 3 Candidates Dom Belza and Jamie Johansson, and US Congress District 4 Candidates Eric Jones and Mike Thompson on August 25, 2026, beginning at 6:00pm at the Yuba County Government Center Board Chambers located at 915 8th Street in Marysville, Yuba County, Ca.

Agenda (schedule subject to change)

6:00-6:30pm	Meet and Greet the Candidates
6:30-6:45pm	Welcome and Introductions
6:45-7:15pm	State Assembly Candidates Belza & Johansson
7:15-7:45pm	US Congress Candidates Jones & Thompson

This non-partisan event is free and open to the public. Join us for a discussion with a focus on key local issues, such as agriculture, water, local infrastructure, economic development, and public safety. The YSFB requests attendees to submit potential questions in advance at <https://forms.gle/HzRzvoWweai5p4rR9>. Questions from the floor may also be fielded during the moderated sessions as time permits.

"The Yuba-Sutter Farm Bureau is committed to providing opportunities for our community to hear directly from the candidates seeking to represent us. Agriculture is a cornerstone of our local economy, and the decisions made in Sacramento and Washington, D.C., have a direct impact on our communities and members. We invite everyone to attend, learn about the candidates' positions, and participate in this important civic conversation." — Brian Greathouse, President, Yuba-Sutter Farm Bureau

For more information about the forum, contact the YSFB at ysfb@ysfarmbureau.com or (530) 673-6550.

**CA ASSEMBLY
DISTRICT 3**

New Investment Aims to Give Growers Another Tool Against Navel Orangeworm

Sourced from the Almond Board of California

California almond growers know the challenge navel orangeworm brings every season. The pest can reduce crop quality, increase production costs and raise concerns around aflatoxin and marketability. Now, new additional funding is helping continue an industry-backed research effort to advance another tool growers may one day be able to use as part of an integrated pest management program.

The Foundation for Food & Agriculture Research, the Almond Board of California and Flyttr™ partnered on a nearly \$5 million grant to advance development of a biological approach targeting navel orangeworm in almonds and pistachios. ABC is helping fund a portion of the project, reflecting the almond industry's continued investment in research that supports long-term orchard productivity, crop quality and grower profitability.

The project centers on Flyttr's Friendly™ navel orangeworm technology. The concept is simple:

release Friendly™ male moths into areas with pest pressure. When those males mate with wild females, no surviving offspring are produced. With continued releases over time, the goal is to reduce the pest population and lower damage pressure in orchards.

For growers, the significance is not that this replaces today's best practices. Sanitation, monitoring, mating disruption, timely harvest and well-timed treatments remain important parts of navel orangeworm management. Instead, this research is focused on developing a targeted biological tool that could complement existing programs and help reduce reliance on conventional insecticides over time.

Navel orangeworm remains one of the costliest pests facing California tree nuts, with industry losses estimated at more than \$800 million each year. Damage can affect yield, quality and food safety, which is why the pest continues to be a priority for research, industry collaboration and new technology development.

Funding from FFAR and industry partners will support the continued work needed to move the technology closer to practical use, including large-scale production systems and field studies. That means the effort is still in development, but it represents an important step toward expanding the number of durable tools available to growers managing navel orangeworm pressure.

ABC's role in helping fund this work is part of a broader commitment to support practical, science-based solutions for almond growers. By investing alongside partners, the almond industry is helping advance research that could protect crop value, strengthen pest management options and support the long-term competitiveness of California almonds.

Why California Almonds

A unique climate, consistent supply, and decades of expertise make California almonds the #1 choice for quality, reliability, and value.

Growing *Expertise*

Nearly 90% of California almond farms are family farms, with nearly 70% of orchards being 100 acres or less ¹.

Consistent Quality

California almonds are the #1 choice for quality, backed by science, expertise, and food safety.

Reliable Supply

California's stable almond supply meets growing demand while reducing production impacts.

Food *Safety*

California almonds meet some of the world's strictest food safety standards, including the EU's Pre-Export Check (PEC).

Decades of *Experience*

Growing nearly 80% of the world's supply ².

Built on *Science*

Since 1950, the Almond Board of California has advanced research and industry best practices, backed by data and science.

Growing For Tomorrow

California almond growers advance innovation by supporting pollinators, improving water efficiency, capturing carbon, and creating new uses for almond coproducts.

More than *Quality*

Backed by decades of research and innovation, California almonds offer exceptional quality, more than 30 varieties, and global economic value.
